• ZOOM F3 – ULTRASONIC RECORDING COMPONENTS •

https://zoom-ultrasonic.github.io/ - ©rogs 11.26

MICROPHONE

- Knowles MEMS microphone capsule with internal 48v phantom powered pre-amplifier
- Cable: 3 pin Mini-XLR (F) to XLR (M)

HETERODYNE MONITOR

Cables:

- 3 pin Mini-XLR (F) to XLR (M) (*To F3 channel 2 input*)
- TRS 3.5mm jack to jack *(From F3 channel 1 line out)*

POWER BANK

- Anker 20,000mAH (or similar)
- Connection: USB-C

HEADPHONES

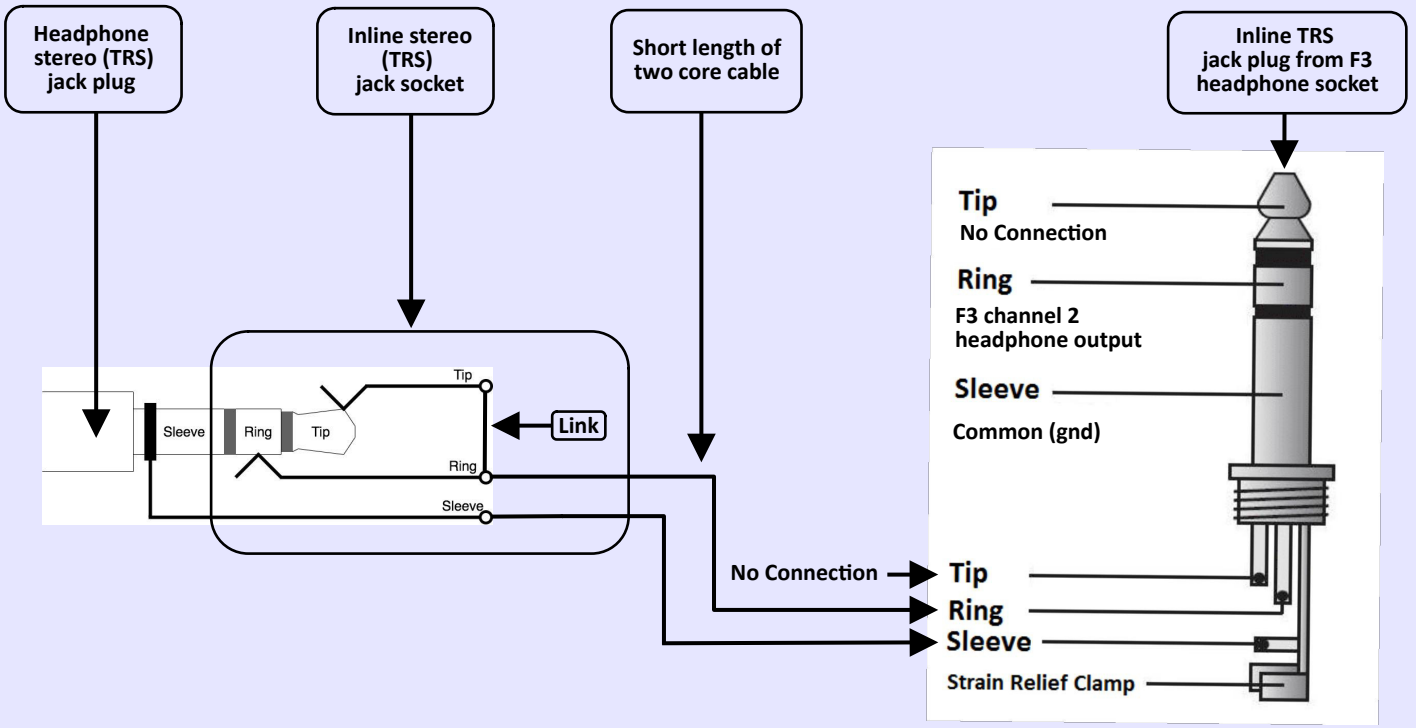

- Connect to F3 3.5mm headphone jack (channel 2 only)*

** See connection options on next page*

ZOOM F3 FIELD RECORDER

- Sampling Rate: 192KHz
- Phantom Power: 48v
- Ch. 1 input: Line 48v
- Ch. 2 input: Line 48v

• Zoom F3 Ultrasound – Heterodyne Monitor Audio Connection Lead •

Audio out is from channel 2 (ring) output only. The short extension lead described here will route the monitor output sound into both headphone earpieces, without the need to modify the headphone output jack. Alternatively, rewiring the headphone jack plug as described below will avoid the requirement to make such a lead:

Disconnect headphone jack channel 1 (tip) output and solder to channel 2 (ring) termination - along with the existing cable already connected - to get audio from both earpieces.

• ZOOM F3 – ULTRASONIC RECORDING FIELD KIT IDEAS •

MICROPHONE

- Mic capsule and impedance balanced interface electronics mounted into 200mm length of 32mm dia. polypropylene pipe.
- Lightweight plastic mic shock mount fitted for easier boom pole handling

HETERODYNE MONITOR

- Mounted in rear bag pocket
- Frequency selection knob easily accessible

MICROPHONE

- Extension Mini XLR cable fitted to allow microphone to be remotely mounted onto extendable boom pole

LowePro SH140 Camera Bag (or similar)

- F3, power bank and associated connection cables fitted into bag for easy portable use
